## CERTIFICATION OF NONSEGREGATED FACILITIES

(Applicable to federally assisted construction contracts and related subcontracts exceeding \$10,000 which are not exempt from the Equal Opportunity clause.)

The federally assisted construction contractor certifies that he does not maintain or provide for his employees any segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The federally assisted construction contractor certified, further that he will not maintain or provide for his employees any segregated facilities at any of his establishments, and that he will not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The federally assisted construction contractor agrees that a breach of this certification is a violation of the Equal Opportunity clause in this contract.

As used in this certification, the term "segregated facilities" means any waiting rooms, work area, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or area, in fact, segregated on the basis of race, creed, color, or national origin, because of habit, local custom, or otherwise. The federally assisted construction contractor agrees that (except where he has obtained identical certifications from proposed contractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding \$10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such, certification in this file.

#### PROJECT DESCRIPTION:

This project located at the Central Kitsap Treatment Plant in Poulsbo, WA included \$30 million worth of upgrades that included new facility buildings, digester control building improvements, and fire protection design coordination. The existing ventilation system was replaced and the design includes aeration basins for nutrient removal, cogeneration, reclaimed water filters, and waste activated solids thickening. This project included reclaimed water feed pumps at the ultraviolet (UV) disinfection effluent channel. The existing activated sludge secondary treatment system has been expanded and modified to provide the total nitrogen removal required for reclaimed water production. Three existing blowers will be replaced with high-efficiency (high-speed) turbo blowers. This project furnishes the plant with an internal-combustion engine-generator that will use digester gas as the fuel source. This engine generator will generate electricity that would be either used throughout the plant or supplied to the local electrical power grid. The waste heat from the engine-generators will be used to heat the digesters and the treatment plant buildings. The solids thickening upgrades includes waste activated sludge (WAS) pumps, rotary drum thickener, polymer system, sludge storage, and sludge pumping for tank mixing and digester feed. The addition of the WAS thickening separates primary and WAS thickening operation to produce thicker sludge to the digester; in turn, this increases the digester effective capacity and delays a costly digester upgrade.
