

North Beach Water Semi-Annual System Flushing Schedule

North Beach Water District will be conducting its semi-annual flushing program over several weeks starting December 2nd, 2019. Water main flushing is an important preventative maintenance procedure to remove sediment buildup and stagnate water in the lines. We will be using hydrant flushing road side signs to inform you of when we will be flushing in your neighborhood. Flushing may result in temporary lowered pressure and slight discoloration of the water. Even if we are not flushing near your neighborhood you may experience lower pressure due to the increased velocities required to scour and lift sediments within the main. If you find you have discolored water, run the cold water for a few minutes to clear the lines. If the cloudy water persists please contact me for assistance.

In addition, the District will be adding chlorine to the distribution system during the flushing program. The chlorine is being added to help remove biofilm buildup in the water mains and disinfection during the flushing event. The chlorine residuals may be detectable until December 31, 2019 or longer.

We will be flushing Monday through Friday between the hours of 8:00AM to 4:00PM. We expect the flushing program to last through December 13, 2019.
