

# North Beach Water District

would like to remind you to

## WINTERIZE YOUR HOME

Recent winters have brought cold weather to the Peninsula. With this in mind and the forecast for cold weather this winter, North Beach Water District is strongly encouraging its customers to take the necessary precautions to avoid costly damages associated with failure to winterize.

Please consider implementing the following winterization steps:

- ◆ Turn off outside faucets and disconnect hoses.
- ◆ Insulate outside faucets with Styrofoam covers or other insulating material.
- ◆ Insulate exposed pipes in unheated areas such as crawlspaces and under the kitchen and bathroom cabinets.
- ◆ Locate your main water control valve or have one installed in case you need to shut off the water supply.

Seasonal and part-time residents should also:

- ◆ Shut off the main water supply.
- ◆ Turn off electricity to and drain the water heater.
- ◆ Drain and blow out the water supply lines.
- ◆ Winterize toilets and drain traps by filling them with biodegradable antifreeze.
